HS 109 SHANNON LINEN 100% LINEN 310GRM, 10OZ

Linen as Nature Intended.....

The manufacture of linen yarn and fabric is a complicated process, one that requires skill and expertise from the cultivation of the raw flax plant, to the combing and processing of the fibres in preparation for spinning and weaving.

The use of linen dates back to ancient times: it was the first known textile fibre in the world, the earliest traces of its use dating back to 8000 BC.

Linen is highly absorbent and a good conductor of heat, keeping the body cool when worn in hot climates. It has a smooth, lustrous surface with a natural resistance to staining. The linen cloth

Holland & Sherry has developed for this collection is woven from a 2 ply warp and weft, 100% linen yarn for extra durability and is unlike any other Linen cloth of its kind. The weave construction is perfect for jackets, trousers, skirts or dresses making it the ultimate smart, cool or casual wear fabric for spring & summer.

Why Choose a cloth with Summer Kid Mohair...?

Summer Kid Mohair is the fibre produced from the first shearing of a mohair goat. Because it is the first ever clip, the fibre tends to be the softest; subsequently the fibre produced becomes coarser. In this instance Holland & Sherry have selected the first clip from the mohair goat and blended it with an 18.5 micron merino wool to produce a fabric that is.....

- Durable - mohair is the most durable of all animal fibres. When blended with wool the lifespan and quality of the garment are enhanced. With the added benefit of the mohair fibre's natural lustre the garment will always look impeccable.
- Resistant to soiling and creasing - the smooth scales of the mohair fibre stop dirt from becoming trapped and the fabric from becoming creased. Both wool and mohair fibres also benefit from having considerable natural stretch properties.
- Insulating - mohair is an insulator; wool is a conductor. Together, they produce the perfect fabric for both warmer and cooler climates.

HS 129 SNOWY RIVER
TROPICAL WORSTED SUITING
100% SUPER 120'S WORSTED
265GRM, 8½OZ

The Snowy River region of Australia is peopled today by the descendants of the early settlers who introduced the original Merino flocks into Australia over a century ago. Through careful breeding and a nutritional diet of fresh grass and herbs they have managed to refine the Merino blood line, which has led to the creation of premium fleeces with unique characteristics. Snowy River fabrics show better drape and are soft and luxurious to the touch owing to the regular structure and crimp of each fibre.

Improved uniformity and consistency of each fibre length, plus the elimination of coarse fibres, result in a softer, kinder fabric. Clear, icy streams and undulating flower filled meadows create cleaner habitats resulting in whiter, cleaner fleeces which allow a more efficient dye uptake. The result; a fabric with superior colour levelness and light refraction. Uniform fibres offer increased comfort, appearance and performance resulting in improved garment shape retention and durability.

HS 129 SNOWY RIVER - 368000'S

HS 149 CASHIQUE SUITINGS
100% SUPER 150'S WITH CASHMERE & SILK
240GRM, 7½OZ

By combining the strong characteristics of mulberry silk with the nobility of cashmere and superfine wool, Holland & Sherry has created Cashique: a cloth of unsurpassed quality with luxurious handle and beautiful drape.

Mulberry silk is produced from a specific species of silkworm which chooses to feed exclusively on Mulberry leaves. The resulting mulberry silk thread is not only incredibly strong and durable, but is also rounder, finer, smoother, and is the highest quality silk available. Mulberry silk gives the cloth a distinctive shimmering, lustrous appearance resulting from the fibres' triangular, prism-like structure which allows the surface to refract incoming light at different angles. Appropriate for all climates, the naturally good moisture absorbency of silk and cashmere allows the fibres to maintain their insulation properties making Cashique cloth comfortable to wear even in warm climates.

HS 159 CRYSTAL SPRINGS
100% SUPER 130'S WORSTED JACKETS
240GRM, 7½OZ

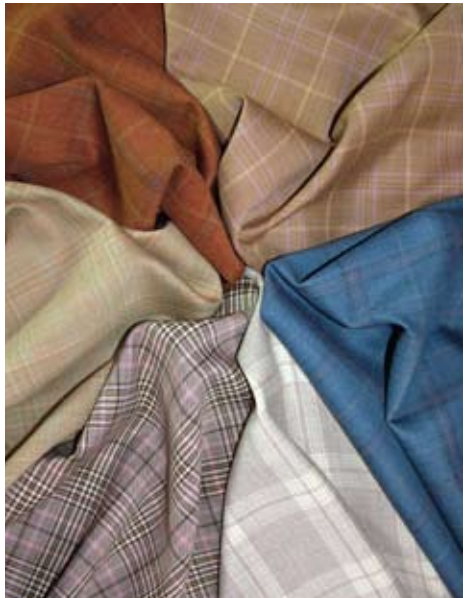

Inspired by Crystals, this range of fabrics combines opulent tones with pleasing geometric designs and plaids, in the same way as the symmetrical structure of a crystal displays a delicate array of colour as light refracts through it. Having evolved over time, crystals take on many forms: diamonds, rubies, emeralds and snowflakes, to name but a few. Their structures are complex, but all demonstrate well defined and often pleasing geometric shapes and colourings.

Holland & Sherry present their new offering of Crystal Springs; Super 130's luxury worsted Jackets, now in its 5th season. This familiar quality is renowned for its exceptional drape and elegant styling. Its superior, lightweight handle makes it the ultimate choice for mid to warm climates. Also incorporated in this season's bunch are a range of cotton/silk solaro fabrics, easily recognisable by their intense colour, together with a range of super 150's lightweight worsted wool cavalry twills. This new range of fabrics will add to and compliment any wardrobe.

**HS 169 SILK ESSENCE
SUPER 100'S WORSTED WITH SILK
250GRM, 7½OZ**

Silk has always held a special position as a quality fibre, and was originally reserved for the Emperors of China, but quickly became popular throughout Chinese culture, Asia and beyond by means of the Silk Road. The Silk Road refers to the extensive trade routes across Asia and connecting North Africa and Europe. This network extended over 8,000km and linked traders, merchants, nomads and soldiers enabling the transportation of luxury goods including silk, rubies, diamonds and pearls across the continents. Silk is a natural protein fibre spun by the silkworm as it makes its cocoon. Silk fibres have a triangular cross section with rounded corners, allowing light to reflect at many different angles giving a natural shine and lustre. It has a smooth, soft texture and is one of the strongest natural fibres. Woven in England with Super 100's wool, silk is the underlying essence of this collection, giving the cloth incomparable drape and luxury handle.
